

In the shipyard in Curacao. The picture is taken from scaffolding around the rudder of the Sophia D, looking onto shipyard cranes on the left and the machine and weld shop on the right.

The Subsea Solutions Alliance does. They rely on Miami Wire and Rope for their rigging materials and Delta Rigging for their chain hoists. "It doesn't matter if the hoists are man-

ual or automatic, they all come to us certified, tested and ready to go," says Peters. "By renting the equipment we do not have to worry about maintaining it. I've shipped their

equipment to as far away as Australia, New Zealand, throughout the Caribbean and South America as well as over to Europe.

Because The Subsea Solutions Alliance uses the equipment underwater the hoists are returned to Delta Rigging for servicing and then SSA gets them back as working units. In order to protect themselves from any unforeseen problems, they will always order an extra hoist. "The last thing you need is for one of your hoists to go out and not have a backup unit handy," says Peters. "We always make sure we have extra drift for the hoists as well. I cannot find, anywhere else in the world, the type of service Delta Rigging provides with their ability to refit the hoists after underwater use."

Solving problems and building systems

The Subsea Solutions Alliance has become unique in the way they build their systems, according to Peters. They'll typically end up running compressors, welders and hydraulics units from diesel engines. For offshore work the only viable power source is from diesel fuel. They also *continued on next page*
